

(645) Upland Wildlife Habitat Management Appendix 2

Range Descriptions:

Bobwhite Quail: Reproducing populations of Bobwhite Quail are limited to the following counties: Tyler, Pleasants, Hampshire, Hardy, Jackson, Putnam, Summers, Mercer, Jefferson, Berkley, Grant, Pleasants, Wood, Mason, Cabell, Monroe and Greenbrier. In most of these counties there are limited ranges identified. Refer to the "Bobwhite Quail Range" map for specific locations within each county. Although a home range may fall within the boundaries outlined, the acreage composition must also be available for the identified species. The likelihood of successful habitat establishment outside the areas identified are low. Careful considerations must be given when working with landowners outside these areas for the given species.

Ring-necked Pheasant: Reproducing populations of Ring-necked Pheasants are limited to the following counties: Hancock, Brooke, Marshall, Ohio, Jefferson and Berkley counties. In most of these counties there are limited ranges identified. Refer to the "Ring-Necked Pheasant" map for specific locations within each county. Although a home range may fall within the boundaries outlined, the acreage composition must also be available for the identified species. The likelihood of successful habitat establishment outside the areas identified are low. Careful considerations must be given when working with landowners outside these areas for the given species.
